

# Poten's Premium LNG Database

LNGas provides comprehensive data on projects, trade, shipping and LNG economics

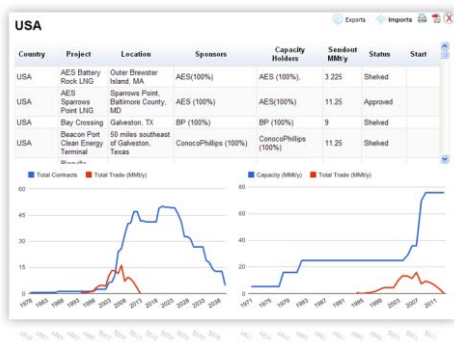

POTEN & PARTNERS

## Poten's LNG Business Intelligence Available on the go, 24/7

Receive access to extensive data on supply, demand, trade, new and existing projects, global pricing and freight rates.

All information can be searched by key criteria and exported into spreadsheets for additional analysis or inclusion in presentations. Information is accessible online via terminals or Poten's LNG app.

## Critical Information

Volatility in LNG markets is causing uncertainty in the global LNG industry. Poten's LNGas provides exclusive details on projects, trade flows and global markets that will enable you to make informed decisions.

Trust Poten to keep you up-to-date with the latest project and trade data.

# Here's what's inside LNGas

POTEN & PARTNERS

## LNG Projects

**Export/Import Project Data:** Over 160 export projects and 340 import projects with floating storage and regasification unit information.

Includes 50 detailed project profiles complete with full descriptions, technical information, maps and photos.

## Contracts

**Contract database:** With details on more than 460 long-term sales and purchase agreements, LNGas is a unique source of commercial information. The database contains, export/import country, venture, buyer, terms, start/end year and volume.

## LNG Shipping

**LNG Fleet Data:** The fleet information is accurate and up to date on all active LNG vessels, new vessels entering the fleets as well as conversions and scrapings.

Poten's **LNG Spot Charter Rate Assessments** provides current and historical assessment rates.

## LNG Trade

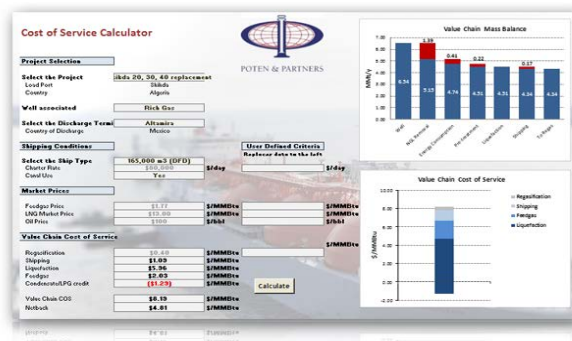

**Trade Data:** Comprehensive monthly import and export data for more than 50 countries, including data for countries that import and then re-export cargoes dating back to 1995.

LNGas includes monthly average import prices for key importing countries.

## LNG Economics

Clients have access to Poten's proprietary **Cost of Service** and **Mass-Balance** tools, giving them the ability to easily calculate the competitiveness of LNG from 19 different LNG liquefaction projects around the world.

This powerful model incorporates the cost of feed gas, shipping, capital and operating expenses along with other critical factors.
