

Analyst – Hydrogen, Ammonia and Methanol

Job Title: Analyst – Hydrogen, Ammonia and Methanol – London.

Summary:

The role of the Poten & Partners' Analyst is to provide detailed clean fuels (Hydrogen, Ammonia and Methanol) market research, advice, and support to consultants in the preparation of reports to clients, acting as part of a multi-disciplinary team.

As part of the rebranding and reorganization of Poten's traditional LNG consulting activities into LNG, Natural Gas & Clean Fuels Advisory, all Poten LNG, Natural Gas & Clean Fuels Advisory personnel are encouraged and expected to broaden their skills to encompass direct involvement in clean fuels and global decarbonization through working closely with the Hydrogen, Ammonia and Methanol team.

In a broader context, all LNG, Natural Gas & Clean Fuels Advisory personnel are required to consider work they are undertaking and any opportunities arising for maximizing cross-selling opportunities that lead to new business engagements for larger "One Poten" service offerings to Clients.

Function/Reporting:

The Analyst is part of the *LNG, Natural Gas & Clean Fuels Advisory* team and reports to the *Global Head, Hydrogen, Ammonia and Methanol*.

The Analyst is expected to work closely with other analysts and consultants of all disciplines across the organization and in different global locations, as required, to contribute to the delivery of highest quality consulting services to the Client.

Primary Responsibilities

The analyst is responsible for delivery of sound, practical Hydrogen, Ammonia and Methanol research data to consultants, and shall:

- Support project teams in research, data input, information gathering, and report preparation.
- Work as a supporting team member across multiple projects and studies simultaneously.
- Provide analytical support through the development and application of proprietary quantitative models and databases.
- Achieve basic understanding of the Hydrogen, Ammonia and Methanol and alternative fuels business and gain a deeper knowledge of all parts of the value chain.
- Assist project managers in maintaining documentation for specific projects complete and up to date, including maintenance and upkeep of Salesforce.
- Develop and maintain a network of industry.

Skills and Competencies

- Ability to write clearly and concisely, free of grammatical, spelling and punctuation errors.
- Awareness and judgement relating to the development of new business areas.
- Participation in opportunities to share intellectual capital and quantitative models, providing positive support and appreciation to those that share.
- Learning from project reviews, responding promptly and effectively to criticism.
- Capability of handling all administrative tasks at Analyst level and timely delivery of work product.

Qualifications and Requirements

- As a direct entrant from college, an advanced degree or technical qualification in relevant fields such as business, economics, energy policy, (chemical) engineering, etc.
- As an entrant from industry, a minimum two years of experience in analytical work in any field
- Considerable research experience in data and information management to develop and assist in the production of reports and proposals.
- Full familiarity with Microsoft Office.
- Necessary documentation (working visa or equivalent) to legally work in the country in which he/she is based.
- Capability to work in a multi-cultural/multi-disciplinary environment.
- Ability to work with a variety of outside agencies, respecting client confidentiality always.
